

Fork Positioner for Forklift

Fork Positioner for Forklifts - A fork positioner is actually a device constructed out of high quality materials meant to endure the most challenging operations and work environments. This particular piece of equipment enables the person driving to control the forks hydraulically without leaving the seat. Side shifting models have the added ability to be able to laterally position the entire load or the arms in order to facilitate much more exact carrying and position in a quicker and much more efficient method.

The only one of its kind fork pocket design can enable the one operating it to be able to safely swing the unit's forks without any fear of damaging the positioning cylinders. This could allow the operator the choice to either perform independent or simultaneous fork movement, dependent upon the requirements of the job. For most forklifts with non-OEM carriages, complete carriages are necessary. Standard OEM carriages can be converted into blade positioners on available units.
