There are well over 220 Doosan service and product sales locations operating in Canada and the United States. In addition, there are more than 90 independent sellers moving lift truck supplies and materials handling equipment. This network allows Doosan Infracore America to aggressively compete in this competitive market. The forklift product line impressively comprises of 63 different models consisting of 82 various battery and engine configurations of Electric-powered and Internal Combustion forklifts. Capacities of these numerous truck models range from 3,000 to 33,000 lbs. All trucks are manufactured in an ISO 9001 qualified facility.

Doosan Infracore America is the fastest expanding lift truck company in the North American marketplace, thanks to their consistency in retaining a high level of customer service quality and optimum product performance to all Doosan Infracore Lift Truck users. The U.S. forklift division stationed in Cleveland has a skilled team experienced in Product Sales, Purchasing, Marketing, Logistical and Technical Support.

Initially the home-based forklift marketplace in Korea was an open import enterprise. Korea Machinery Co. Ltd. begun in 1960, to import fully assembled lift trucks as part of a domestic machinery expansion venture. Sales of these products were originally targeted to state-run companies, large scale businesses, and the armed forces. This eventually led to a unification with Daewoo Heavy Industries Ltd. In 1976, the Forklift Division commenced business operations throughout Korea to overhaul and sell this heavy equipment. By 1978, a lift truck manufacturing plant was successfully completed. Continuous technical training grew to become the new focus for enhancing quality and product development.

Daewoo began the first home-based forklift business in 1967, and rapidly acquired a massive 90% share in the Korean Materials Handling market. By the 1980's, Daewoo's progressive technological advancements combined with sales success placed them in a situation of considerable expansion of their lift truck operations.

In 1981, Caterpillar Industrial Inc. of the United States, proposed a cooperative venture project to respond to competitive pressures in the US materials handling market. This project drastically expanded Daewoo's forklift sales. Construction was completed in 1984 to facilitate a modern plant which helped establish the business for the manufacture of high end added-value goods suited for export. In 1993, the company had a global sales network and started exporting models they had developed through in-house expertise, as a sovereign product. Certifications were then acquired from CE of Europe, UL of the United States and ISO 14001 and ISO 9001, securing expansion possibilities into international markets.
